NEUROPSYCHOLOGICAL ASSESSMENT

Interview date: / / DD MM YYYY

Time started ___ : ___
(24 Hour clock)

Page 2 completed by coordinator
Pages 3 to 16 completed by psychometrist
Pages 18 to 20 completed by neuropsychologist
All pages to be taken to consensus conference
ID # __________________

IDENTIFYING INFORMATION
(The coordinator completes this page)

Date of Birth ___/___/______

Patient Age ____________ Education (from fact sheet) ____________

Occupation (from fact sheet)
6 = Professional/technical 5 = Managerial/office/clerical/sales 4 = Skilled Labour
3 = Not in labour force 2 = Semiskilled labour 1 = Unskilled labour

Maternal Language ________________ Handedness 1 □ Right 2 □ Left

Region of Residence (from fact sheet) 2 Rural 1

Psychometrist Name ____________________________ ID ____________________

Psychologist Name ______________________________ ID ____________________

Problems: HEARING: 1 □ Yes 2 □ No VISION: 1 □ Yes 2 □ No
NEUROPSYCHOLOGICAL TESTS (p. 3-13)

### A. Memory

1) Short-term (inability to learn new information)

|   | 6 | 1 | 2 | 3 | 4 | 5 |

2) Long-term (inability to remember info. known in the past)

|   | 6 | 1 | 2 | 3 | 4 | 5 |

### B. One of the following:

1) Impaired Verbal Abstract Thinking

|   | 6 | 1 | 2 | 3 | 4 | 5 |

2) Impaired Judgement

|   | 6 | 1 | 2 | 3 | 4 | 5 |

3) Other Higher Cortical Disturbance

3.1) Aphasia (language disorder)

|   | 6 | 1 | 2 | 3 | 4 | 5 |

3.2) Apraxia (inability to carry out motor activity despite intact compreh. and motor function

|   | 6 | 1 | 2 | 3 | 4 | 5 |

3.3) Agnosia (failure to recognize or identify objects but intact sensory

|   | 6 | 1 | 2 | 3 | 4 | 5 |

3.4) Constructional Difficulty (inability to copy 3 dim. figure, assemble blocks)

|   | 6 | 1 | 2 | 3 | 4 | 5 |

PRELIMINARY NEUROPSYCHOLOGICAL DIAGNOSTIC CLASSIFICATION

Completed by Neuropsychologist

Criteria 1: Subject is impaired if score on any test is 1.5 SD or more below the mean,

OR

Criteria 2: Subject is impaired if score on more than 1 test is 1.0 SD or more below the mean.

1. A. No cognitive impairment
   B. Cognitive impairment

   If cognitive impairment,
   B1. Does the subject have dementia?

       1 Dementia
       2 Cognitive impairment, not dementia (CIND)
       3 Can’t differentiate

2. How confident are you in your diagnosis with the information available?

       1 very confident
       2 moderately confident
       3 slightly confident
       4 not confident at all

       specify: ________________________

3. Please give further details, if you wish:
DIAGNOSTIC CRITERIA FOR DEMENTIA  

A. Demonstrable evidence of impairment in short- and long-term memory.

Impairment in short-term memory (inability to learn new information) may be indicated by the inability to remember three objects after five minutes. Long-term memory impairment (inability to remember past personal information (e.g., what happened yesterday, birthplace, occupation) or facts of common knowledge (e.g., past Prime Ministers, well-known dates).

B. At least one of the following:
   (1) impairment in abstract thinking, as indicated by inability to find similarities and differences between related words, difficulty in defining words and concepts, and other similar tasks
   (2) impaired judgment, as indicated by inability to make reasonable plans to deal with interpersonal, family, and job-related problems and issues
   (3) other disturbances of higher cortical function, such as aphasia (disorder of language), apraxia (inability to carry out motor activities despite intact comprehension and motor function), agnosia (failure to recognize or identify objects despite intact sensory function), and "constructional difficulty" (e.g., inability to copy three-dimensional figures, assemble blocks, or arrange sticks in specific designs)

C. The disturbance in A and B significantly interferes with work or usual social activities or relationships with others.

D. Not occurring exclusively during the course of delirium.

E. Either (1) or (2):
   (1) there is evidence from the history, physical examination, or laboratory tests of a specific organic factor (or factors) judged to be etiologically related to the disturbance
   (2) in the absence of such evidence, an etiologic organic factor can be presumed if the disturbance cannot be accounted for by any nonorganic mental disorder, e.g., major depression accounting for cognitive impairment
